Senior Software Engineer with 11+ years of experience architecting scalable backend systems, mentoring engineers, and driving modernization initiatives across logistics, gaming, and fintech domains. Adept in .NET, AWS, and secure CI/CD pipelines. Passionate about building resilient APIs, optimizing performance, and delivering user-centric solutions.

EDUCATION

University of Louisiana at Lafayette

December 2015

- Bachelor of Science in Computer Science

SKILLS & TOOLS

Languages: C#, JavaScript, TypeScript, SQL, C++

Frameworks: .NET Core, React

Cloud & DevOps: AWS, GitHub Actions, Netlify

Security: OAuth2, OIDC, MFA, TOTP, SSO

Monitoring: OpenTelemetry, Kibana

Testing: xUnit, Jest

CI/CD: Azure DevOps, GitHub, Jenkins, Veracode, SonarQube

EXPERIENCE

First American Title — Senior Software Engineer | August 2021 – Present

- Spearheaded modernization of escrow systems by replacing legacy ASP/.NET with minimal APIs and AWS-backed services.
- Designed and implemented secure CI/CD pipelines using GitHub Actions, SonarQube, and Veracode.
- Mentored two engineers, resulting in one promotion and improved onboarding efficiency.
- Reduced latency from 1 second to 1 microsecond in critical API endpoints.
- Led architecture for multi-tenant document generation system using Razor templates and S3.

Kaseya — Senior Software Engineer | March 2017 – August 2021

- Led design and rollout of SSO/OIDC system for global users, integrating with Auth0 and custom MFA flows.
- Developed secure onboarding flows for VSA, IT Glue, and BMS platforms.
- Implemented feature toggles and audit logging for sensitive user actions.
- Collaborated across teams to unify authentication strategies and reduce support overhead.

Ainsworth Game Technology — Game Developer | February 2016 – March 2017

- Engine-level breakthrough enabling dynamic symbol highlighting under constrained C++ tooling.
- Built internal tools for game designers to preview and validate symbol behavior.
- Refactored legacy game logic into modular components, improving maintainability and test coverage.
- Supported QA and compliance teams with automated validation scripts.

Enterprise Data Concepts — Software Engineer | January 2014 – February 2016

- Sole developer responsible for API and internal tools driving technician field operations.
- Built scheduling and dispatch systems integrated with GPS and SMS alerts.
- Migrated legacy VB.NET codebases to modern C# services.
- Designed reporting dashboards for operations and customer service teams.
